1. Read the Syllabus.   ✔
2. Create a MART 462 repository.   [bennyyyv/MART-462 (github.com)](github.com)
3. Create a folder in for Homework 1 in your MART 462 repository ✔
4. Talk about what role you are interested in with the class project.

   Since I am a digital art major I am interested in creating the look of the app. Someone in the Discord already said that they're working on badges but I could animate those badges as an achievement popup that would be more engaging for the user. I also have some ideas for a map that would be a lot easier to play as a gif animation that I could easily make. I'm also fully capable of making our app icon and photography and really anything visual that we'd need for the app.

5. Work with Bubble to create a simple application.

   benvpractice-app.bubbleapps.io/version-test/

   I had fun working with Bubble. It's just like a website builder but a little more complex. I think that this service is great for the type of person who'd like using a website template service. It's easier to pick up than code but complex enough to build you something that people won't immediately know that you made it yourself. It's drawbacks are that it'll be hard to make something that's super unique. I think that if you put the time and effort in to make a super well designed and unique app that it may take you just as

long as if you just learned how to code or if you just paid someone to code it for you. With these template like services there's always a limit to what you can do creatively.

6. Submit your GitHub repository link to Moodle.
